

## Feed rollers made of W01 and W03 material – system-based selection

### Description

The systematic further development of the products established on the market has always been a top priority for Wafios. As a result of this, we are now able to offer our tried-and-tested feed rollers in material W01 as well as W03. These high-performance feed rollers are always the first choice when maximum service life combined with high-speed infeed are what is required. Feed rollers made of W01 material are therefore an ideal addition to the product portfolio.

### Machine Types:

- Available for various Wafios machines - we would be delighted to prepare a personal quotation for you

### Our Accomplishments for your Benefit

- **Best value for money due to system-based choice of materials subject to individual requirements**
- **Increased service life with W01 material due to wear-resistant alloy additions**
- **Customized tool designs for both round and profile wire possible**
- **Rapid availability thanks to optimized management of warehouse and blanks**
