

Quick-Change Tool Mounting System for Tube Bending Machines

Quick Clamping System

The quick-change tool mounting system for WAFIOS tube bending machines combines a considerable reduction of tooling times with high operating convenience.

The "one-click system" saves a lot of time, especially when frequent retooling processes are required, while the tool structure itself remains highly robust. Time savings of about 60% are possible (e.g. when converting a three-level tool to a one-level tool structure, including bending die, at a RBV 60 R).

-60%

▲ Quick-change tool mounting system on a RBV 60 R (two-level tool structure)

▲ Changing tools with just one "click"

Our Accomplishments for your Benefit

- Considerable time savings when changing tools
- Reduction of costs thanks to modularity and self-contained parts packages
- High handling convenience
- Increased process safety by reducing error sources when converting tools

Machine Types:

- RBV 42 R
- RBV 60 R
- B10 (available as add-on kit)
